

ZEISS Primo Star HDcam

Connect Your Classrooms

Consider the advantages of having the camera integrated into the tube and a number of interface options. You can connect microscopes in your classroom to each other, using Labscope, the iPad imaging app from ZEISS. Then connect them in turn to HD monitors or projectors to share your images or videos with students. Or use the USB port for free access to the powerful imaging software ZEN lite. You can also save your data directly to the integrated SD card. Give your students the full experience of mutual learning with brilliant images.
